# Northeast Roundtable Caribou Update 2025

BC CARIBOU  
RECOVERY PROGRAM

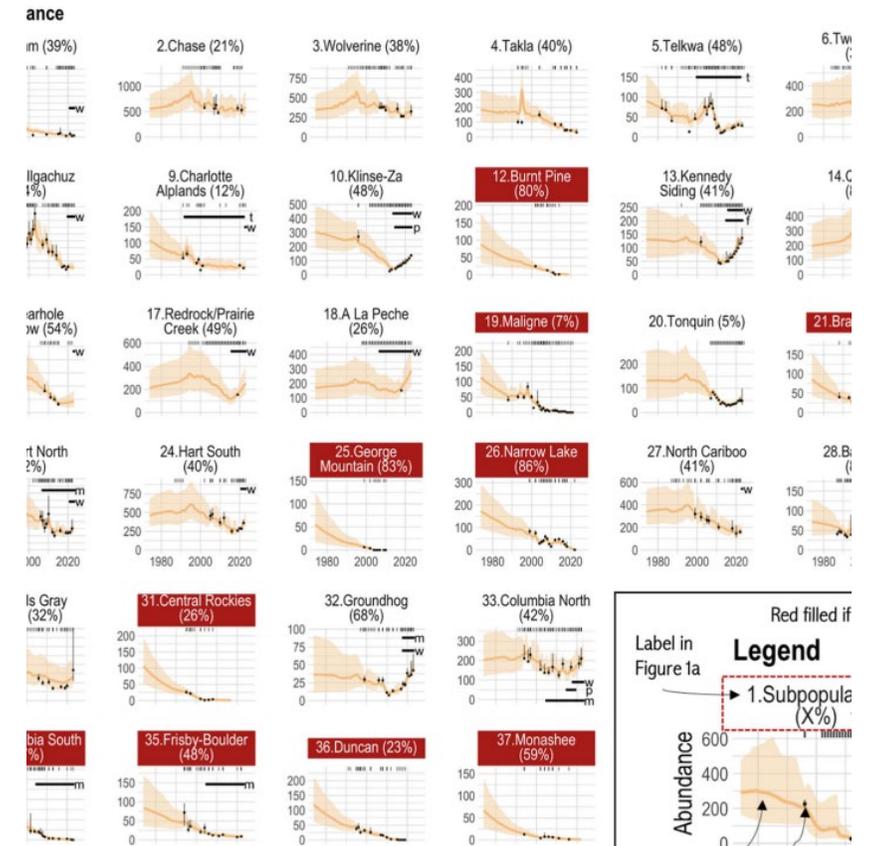

# Caribou in the North East

- Boreal Woodland Caribou
  - NE corner
  - 5 subpopulations
  - 2 transboundary herds (AB and NWT)
  - Threatened
- Southern Mountain Caribou – Central Group
  - 6 subpopulations
  - 2 transboundary herds (AB)
  - Threatened
- Southern Mountain Caribou – Northern Group
  - Graham subpopulation
  - Threatened
- Northern Mountain Caribou
  - 6 subpopulations
  - Special Concern

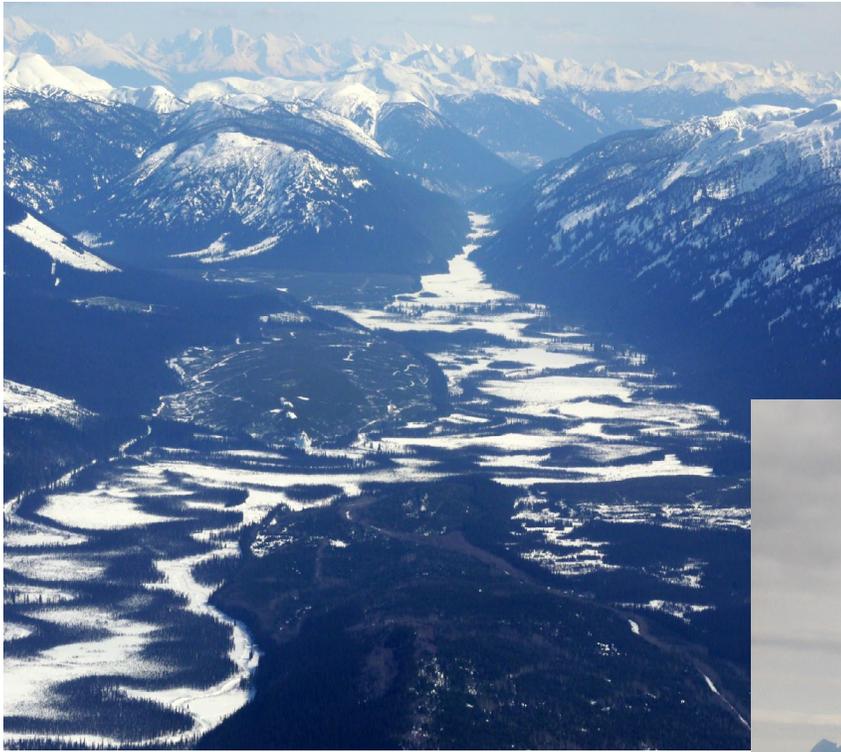

# Caribou population monitoring

- Objective: provide reliable up-to-date population estimates for caribou in BC
- Populations estimates are 1 key metric used for decision support
  - Prioritize when/where to focus recovery actions
  - efficacy/effectiveness of the recovery actions
- Population growth is typically  $\pm 5-10\%$  annually
- “A total of 509 caribou (95% CI 485-556)”

Caribou are difficult to count,  
ecosystems are complex,  
population ranges are large

In the wide open.

But especially in the trees

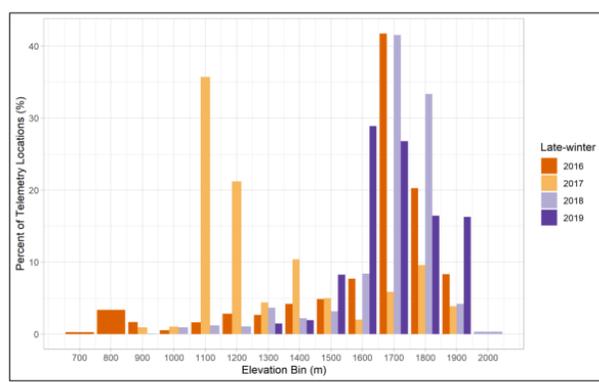

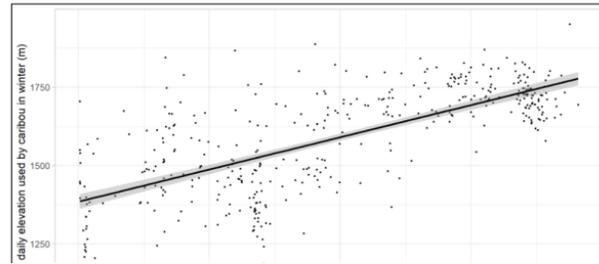

Figure 7. Use of elevation by GPS-collared adult female caribou in the Wolverine range in late-winter (February 1 to March 31) of 2016, 2017, 2018, and 2019.

- For Mountain Caribou: snow depth is a key driver of distribution in late-winter
  - Most central group caribou are driven up to high elevation if snow is deep
  - Northern/central group: windswept alpine terrestrial lichen
- Distribution can vary by herd and ecotype
- More caribou will stay at low elevations low if snow depth is low
- For a population survey - snow depth can be a significant advantage or major challenge – depending on the year or survey timing.
  - Context doesn't make it into the graphs/results
- Important to note that caribou behavior/distribution can vary by herd or even within the herd.
- Can makes it challenging to figure out numbers over time, if there are significant changes in distribution during survey time

# Caribou Population Surveys

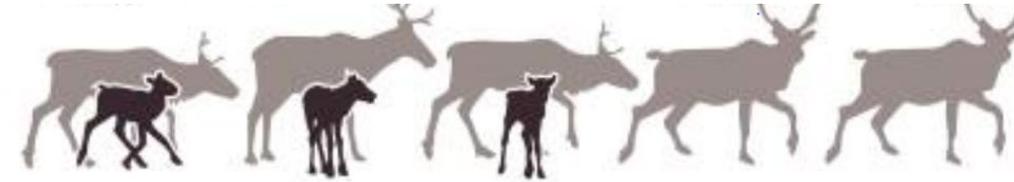

- When surveying a population from aircraft inevitably animals (caribou) are missed.
- Missed animals are referred to as sightability or visibility bias
- The “mark” on caribou are GPS collars which are placed on a random portion of the population
- During a population survey the proportion of collared animals missed can be used to estimate the proportion of the population missed

# Essential data gathered from radio collars and aerial surveys

## Population data

Proportion of calves  
(aerial surveys)

**COWS SURVIVAL**  
(year-round collar monitoring)

## **EVIDENCE OF POPULATION GROWTH**

**15-16% of calves in population**

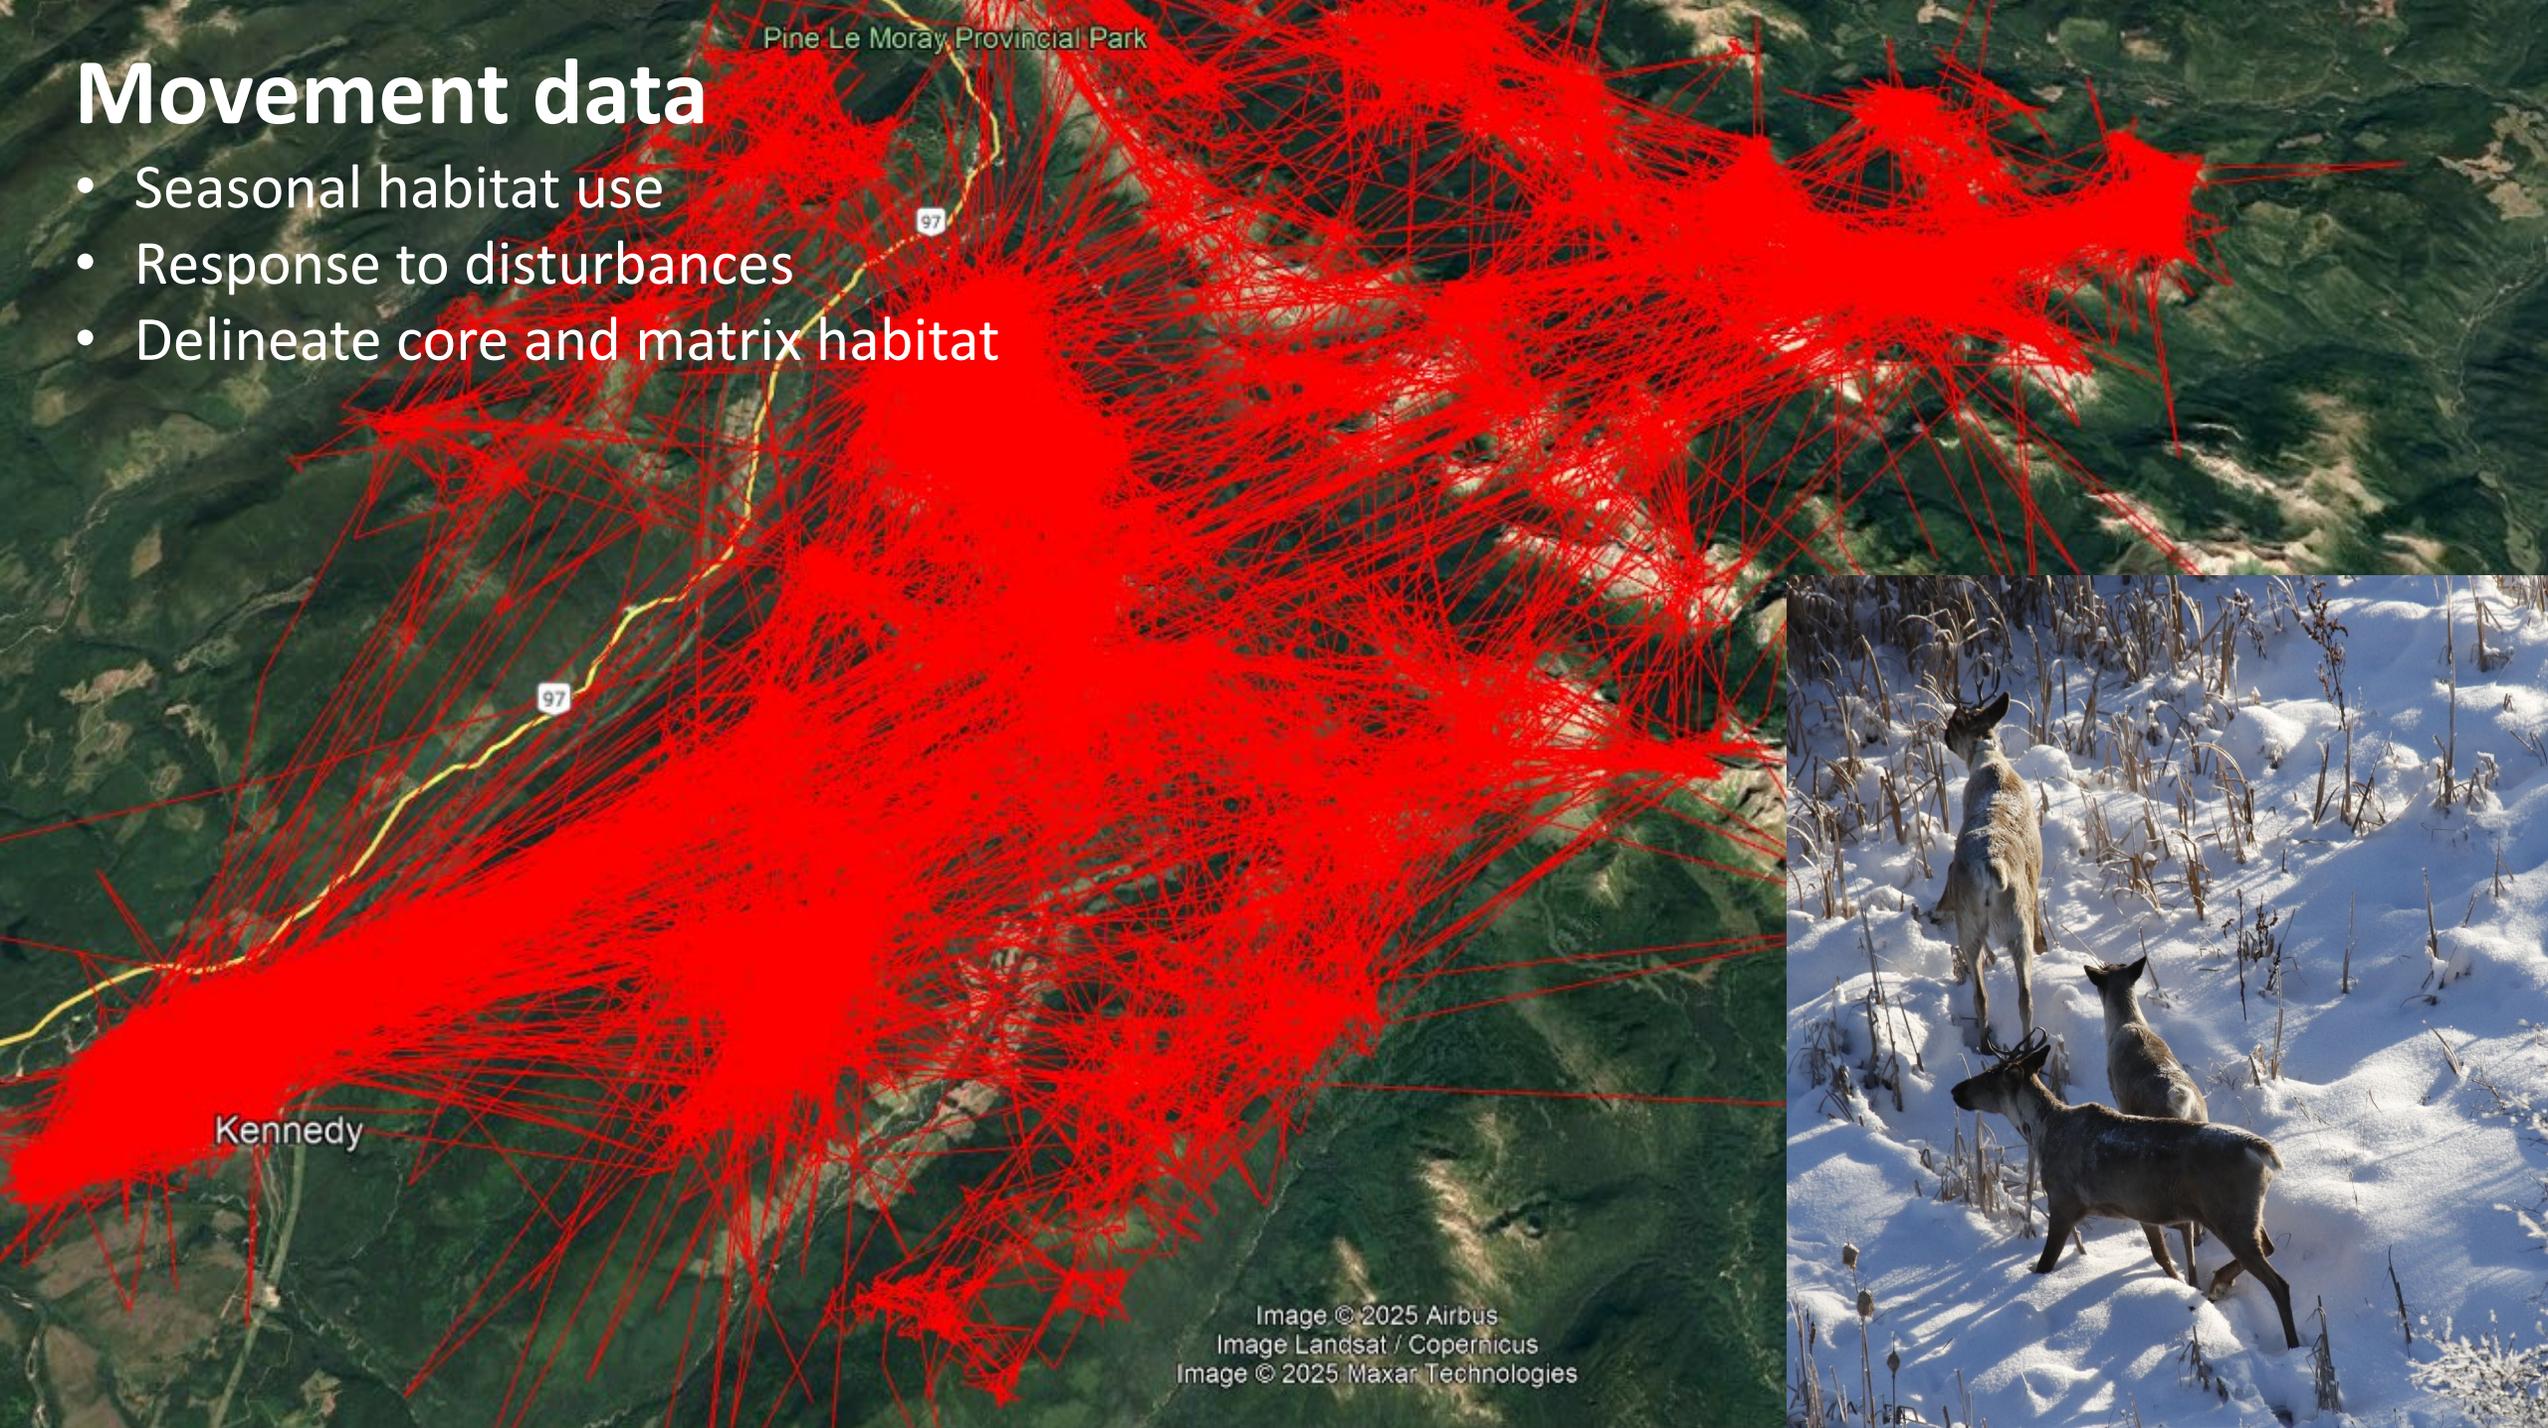

**25-28 calves/100 cows**

## **Health data**

- Pregnancy status
- Parasite load
- Trace minerals
- Hormones

# Movement data

- Seasonal habitat use
- Response to disturbances
- Delineate core and matrix habitat

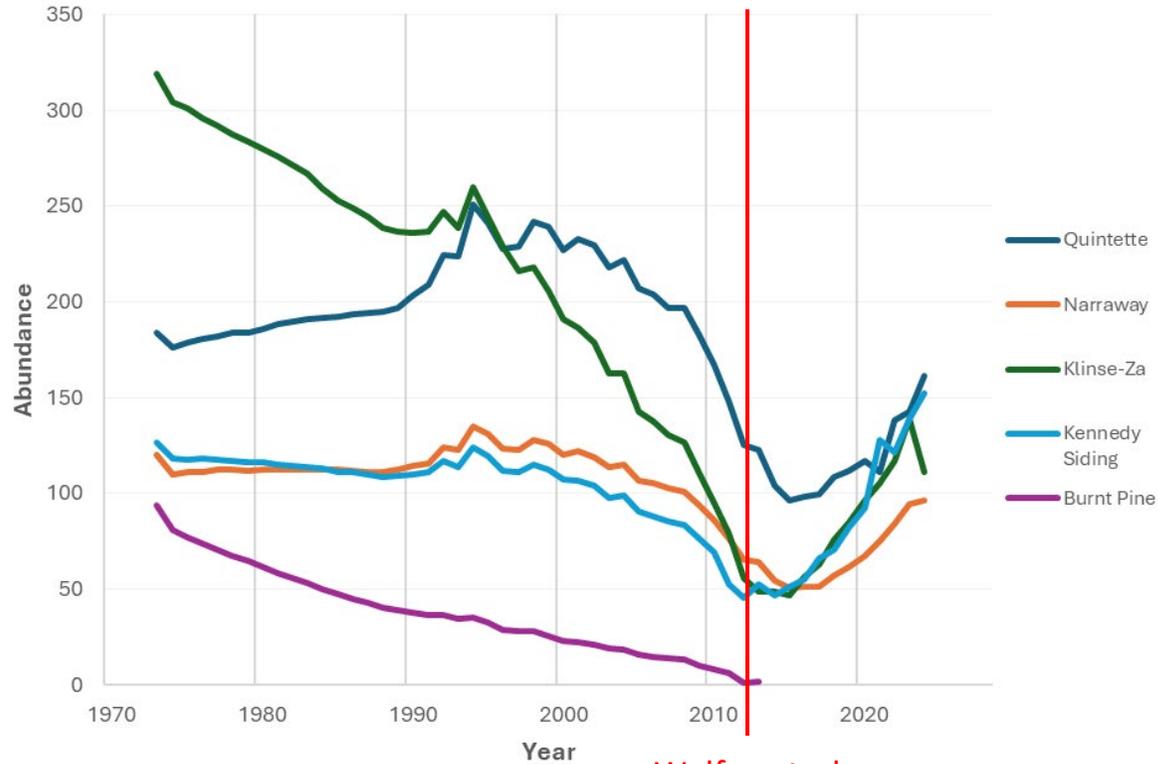

Kennedy

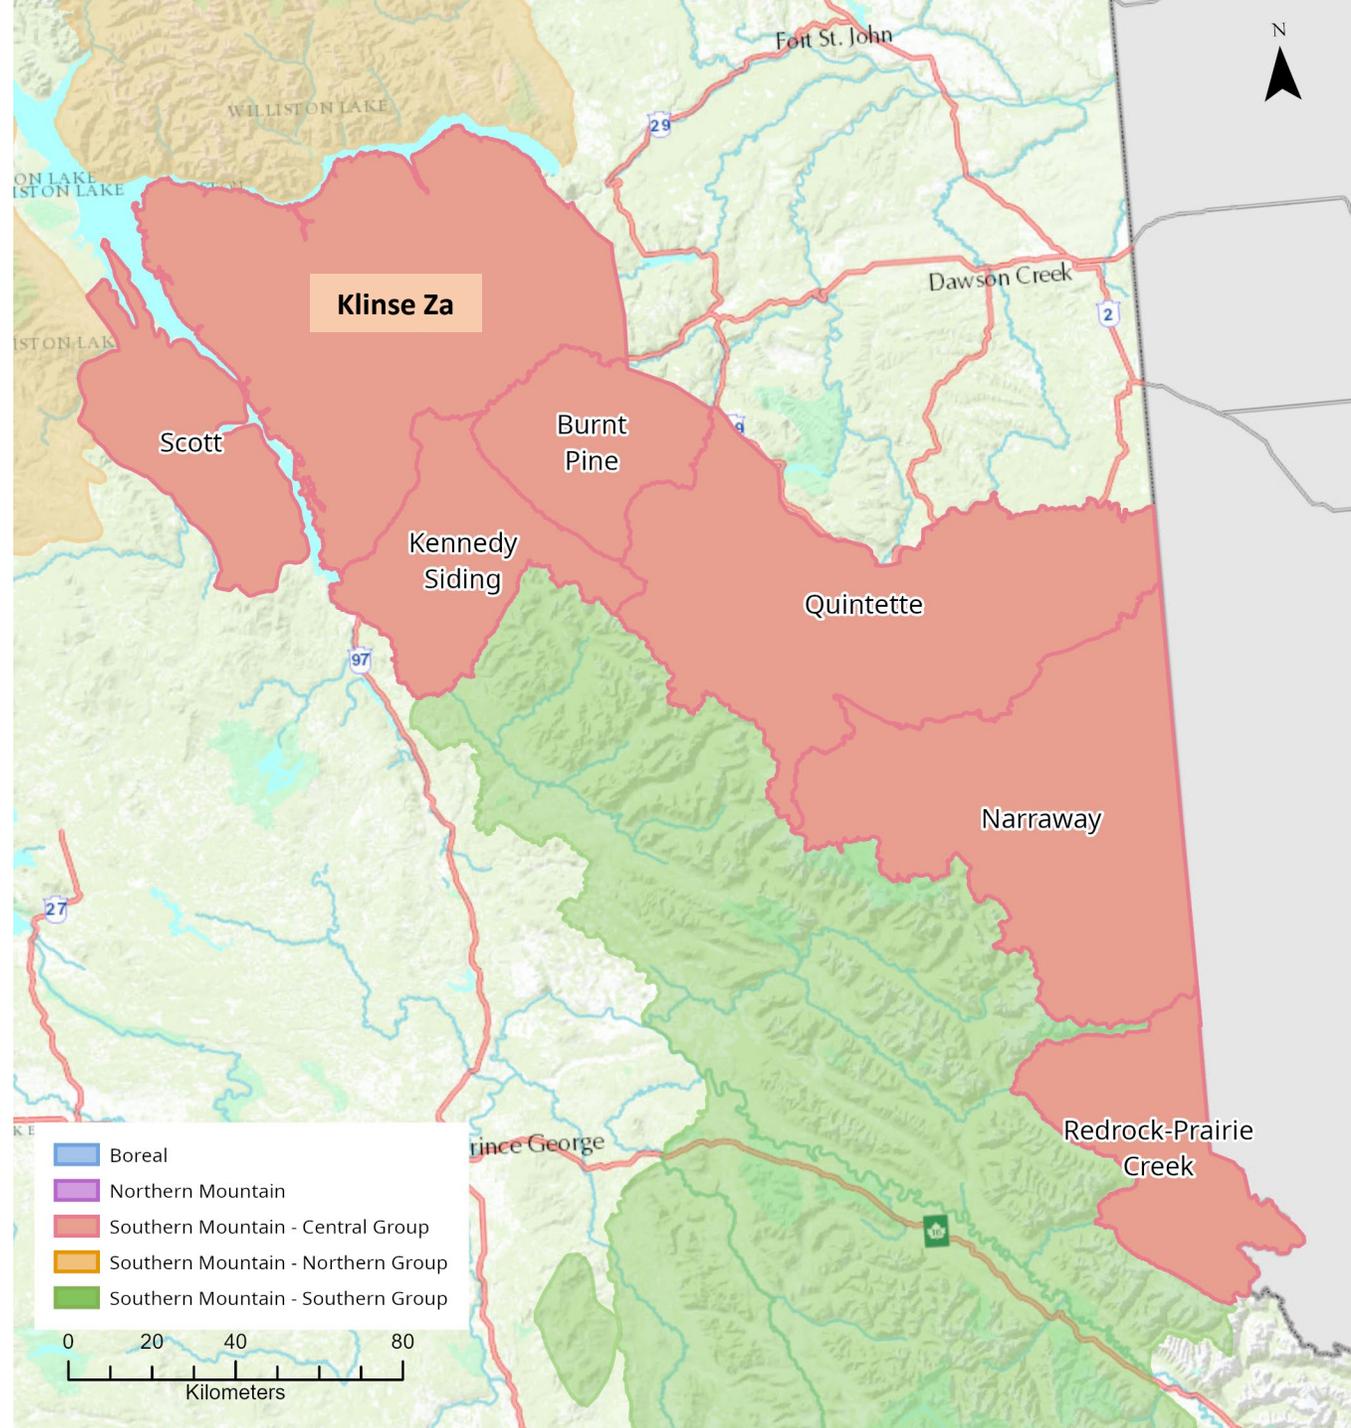

# SM-Central Group – population trend

1500 caribou added to SMC pops since the implementation of emergency recovery actions

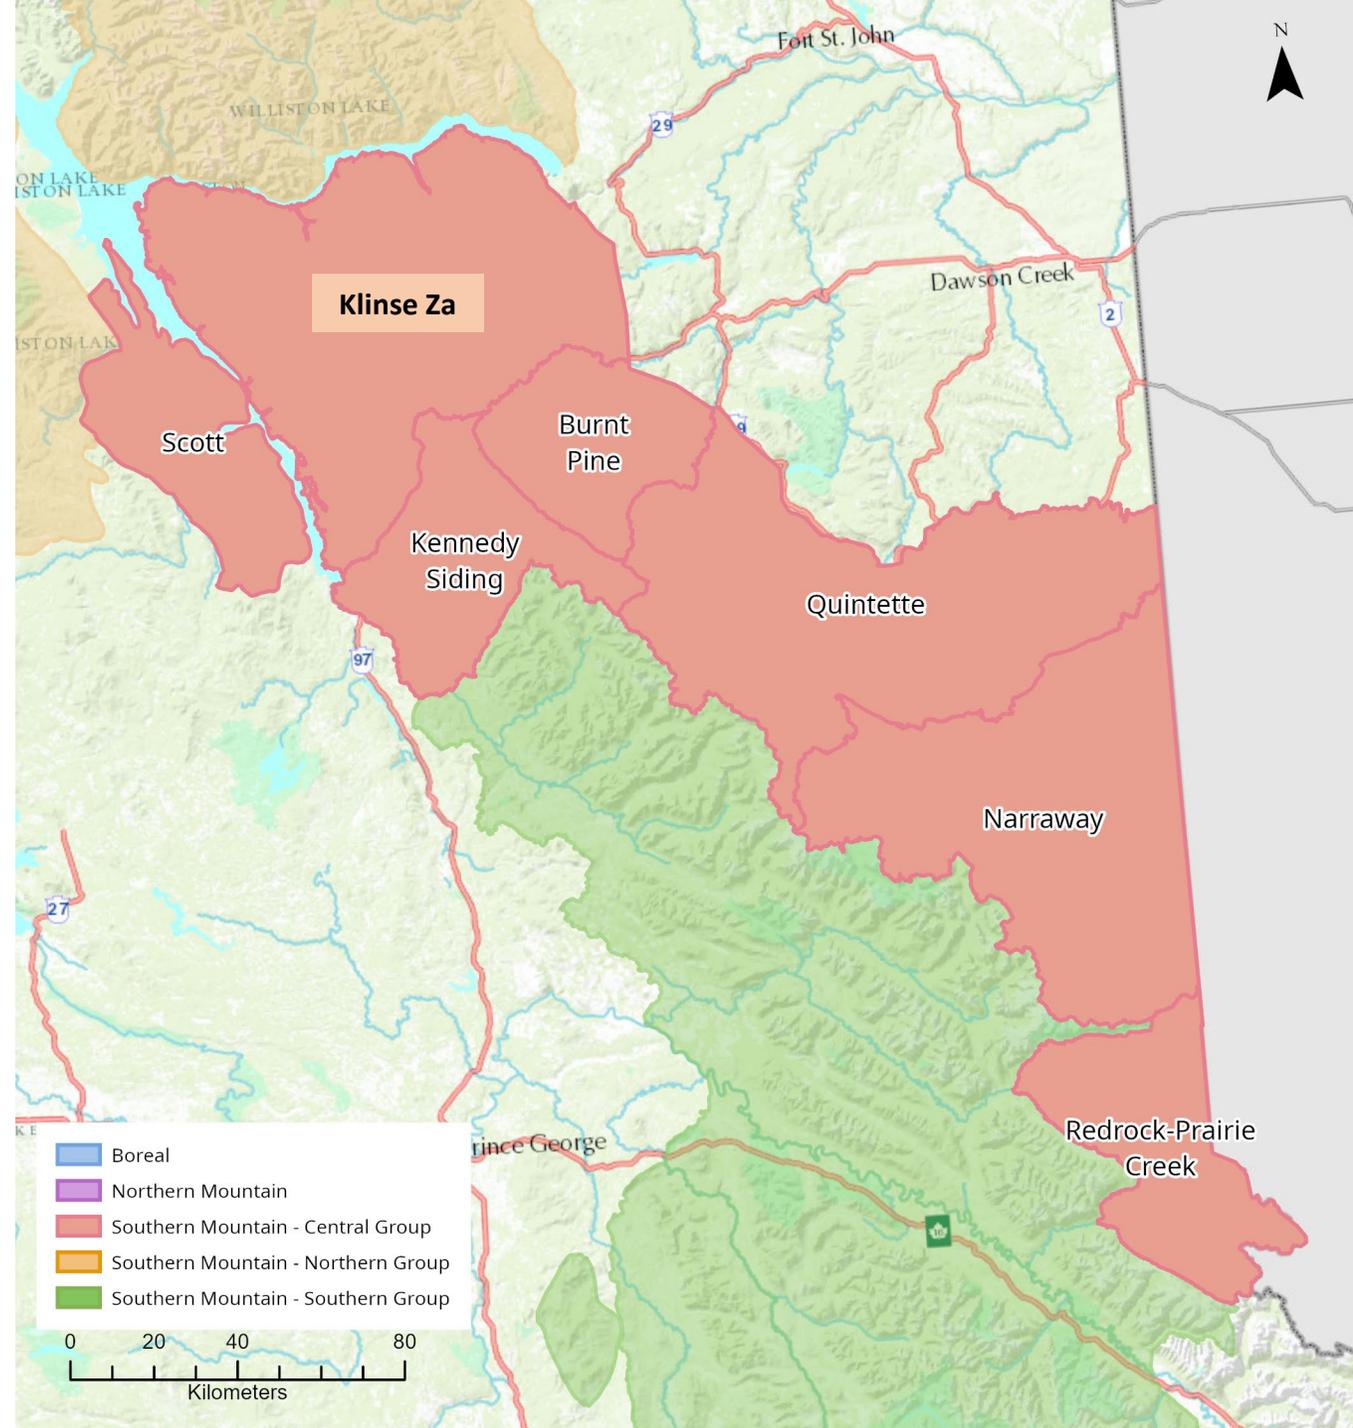

Wolf control  
Mat pen  
Supp feeding

# SM-Central Group – recent monitoring results

## Captures 2025

Range	# of collars deployed Jan 2025	# of active collars – Feb 2025	# of deaths since April 1 <sup>st</sup> 2024
Kennedy Siding / Burnt Pine	5	11	0
Quintette	5	8	1
Narraway (BC)	2	6	0
<b>TOTAL</b>	<b>12</b>	<b>25</b>	<b>1</b>

# SM-Central Group – recent monitoring results

## Inventory 2024

Range	Survey count	% calves	Calves:100 cows	Bulls:100 cows	Pop est
Klinse-Za	159	19%	70	127	154
KS/BP MR	155	21%	46	59	155 (SCF = 1)
Quintette (Old boundary)	75 (Minimum)	24%	44	39	
Narraway (BC & AB)	125 (Minimum)	23%	48	0	

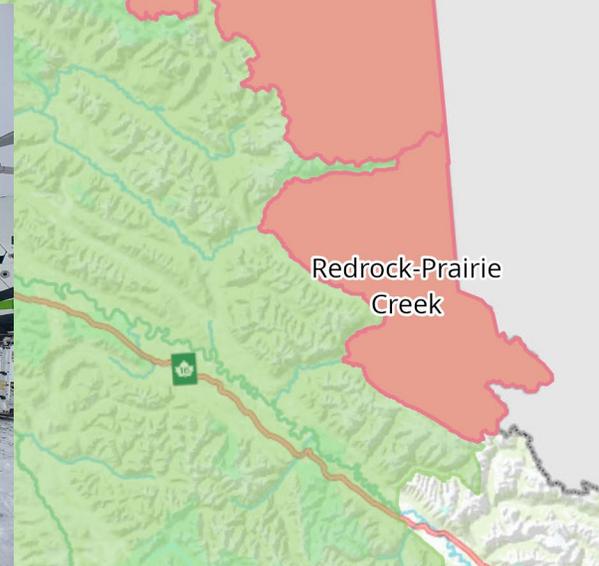

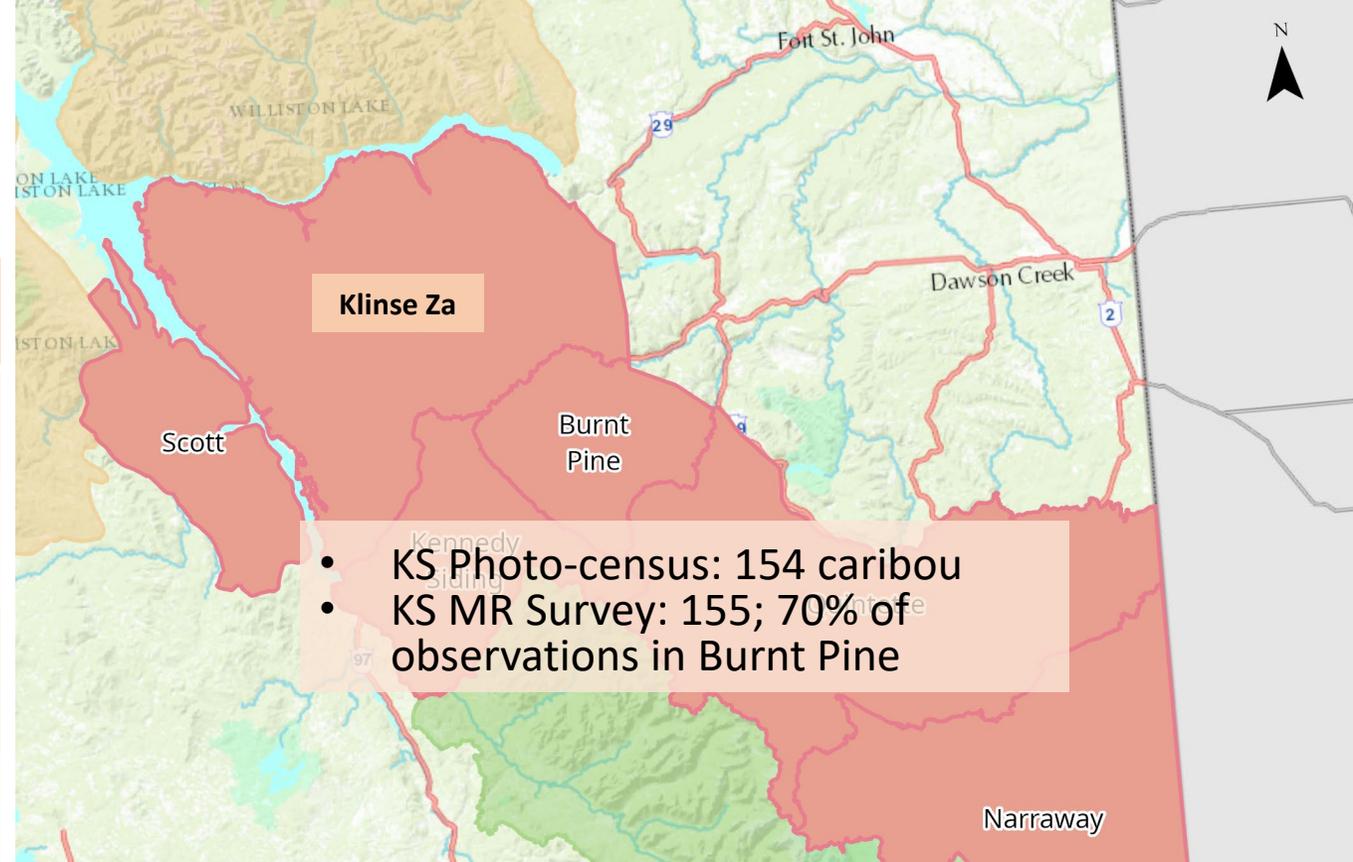

### Population Growth target

**15-16% of calves in pop**

**25 calves:100 cows**

### Winter 2025:

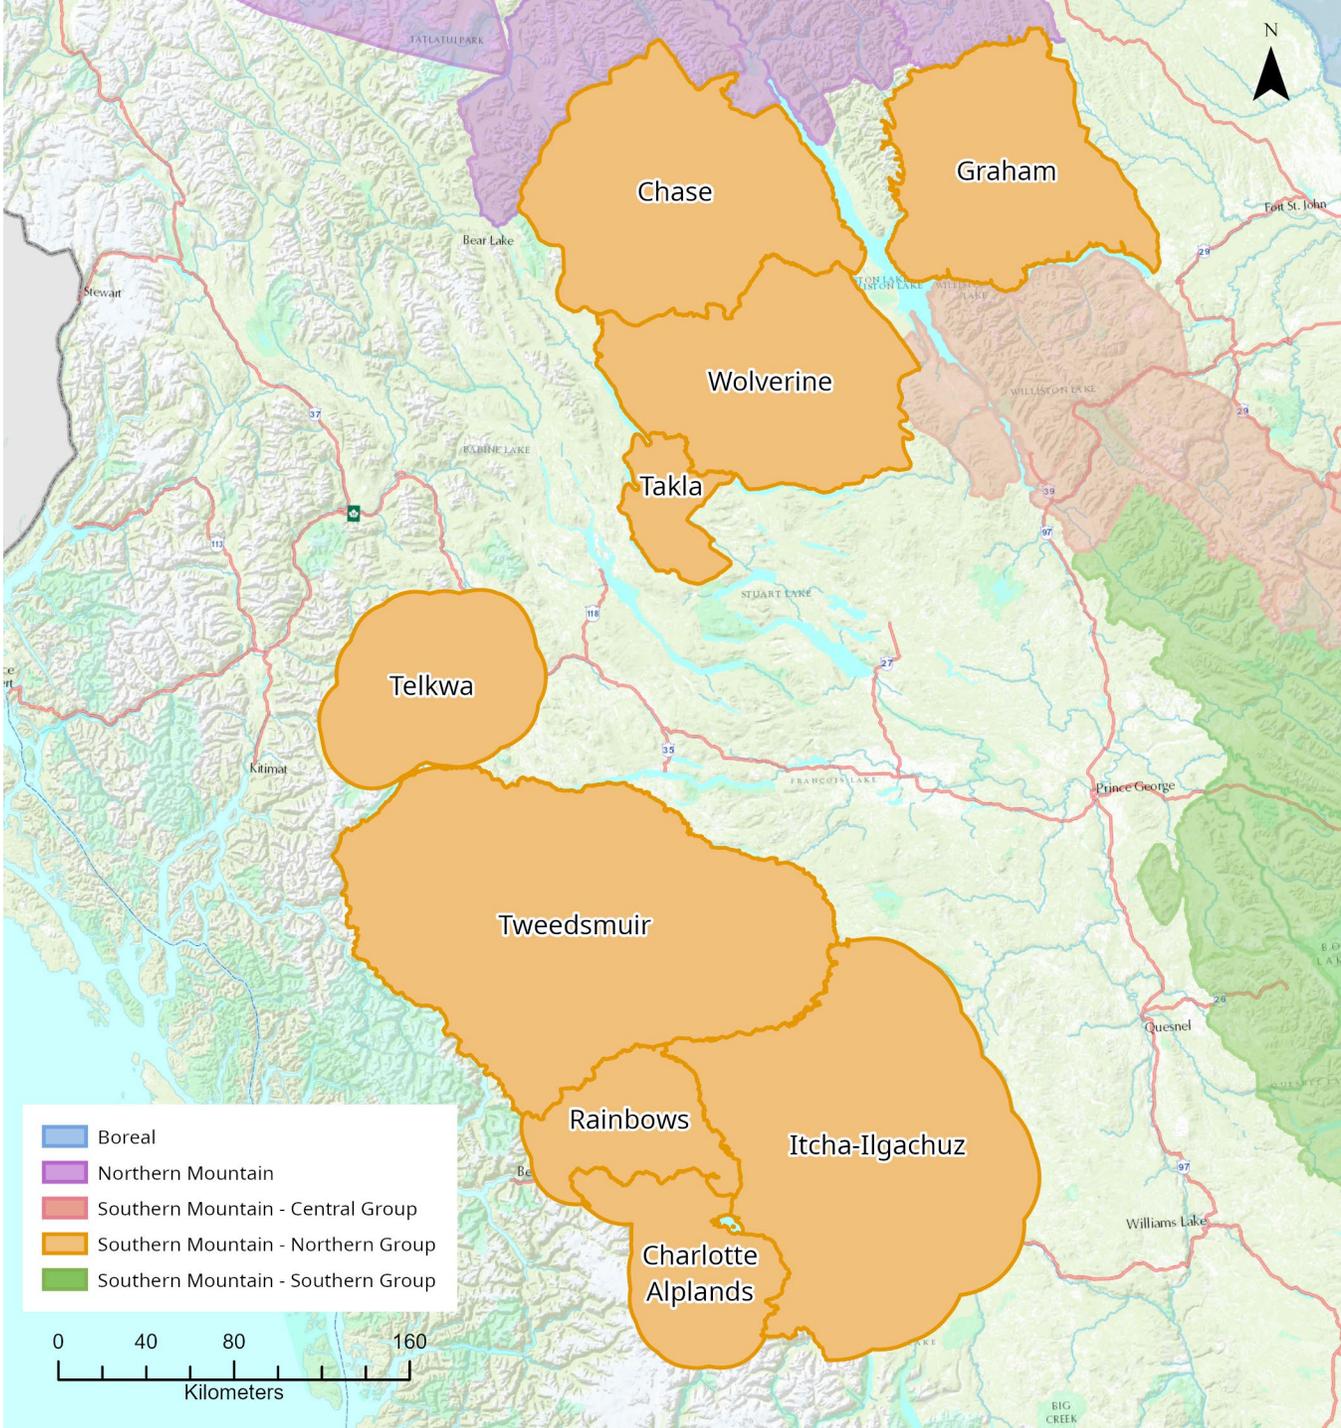

- Maintenance of collars
- Mark-resight in Quintette
- Recruitment in Narraway (maybe)

# SM-Northern Group – Graham 2024

# observed	% calves	Calf:cow	Bull:cow	Adult female survival	Pop estimate
272	20.6%	48.2	77.6	94%	436

- Challenging survey conditions in 2024
- Increase from 2021 estimate of 197 caribou (92-417, 95% CI) with 63% sightability (12/19)
- Survey results suggested population increase
- Next mark-resight planned for March 2026

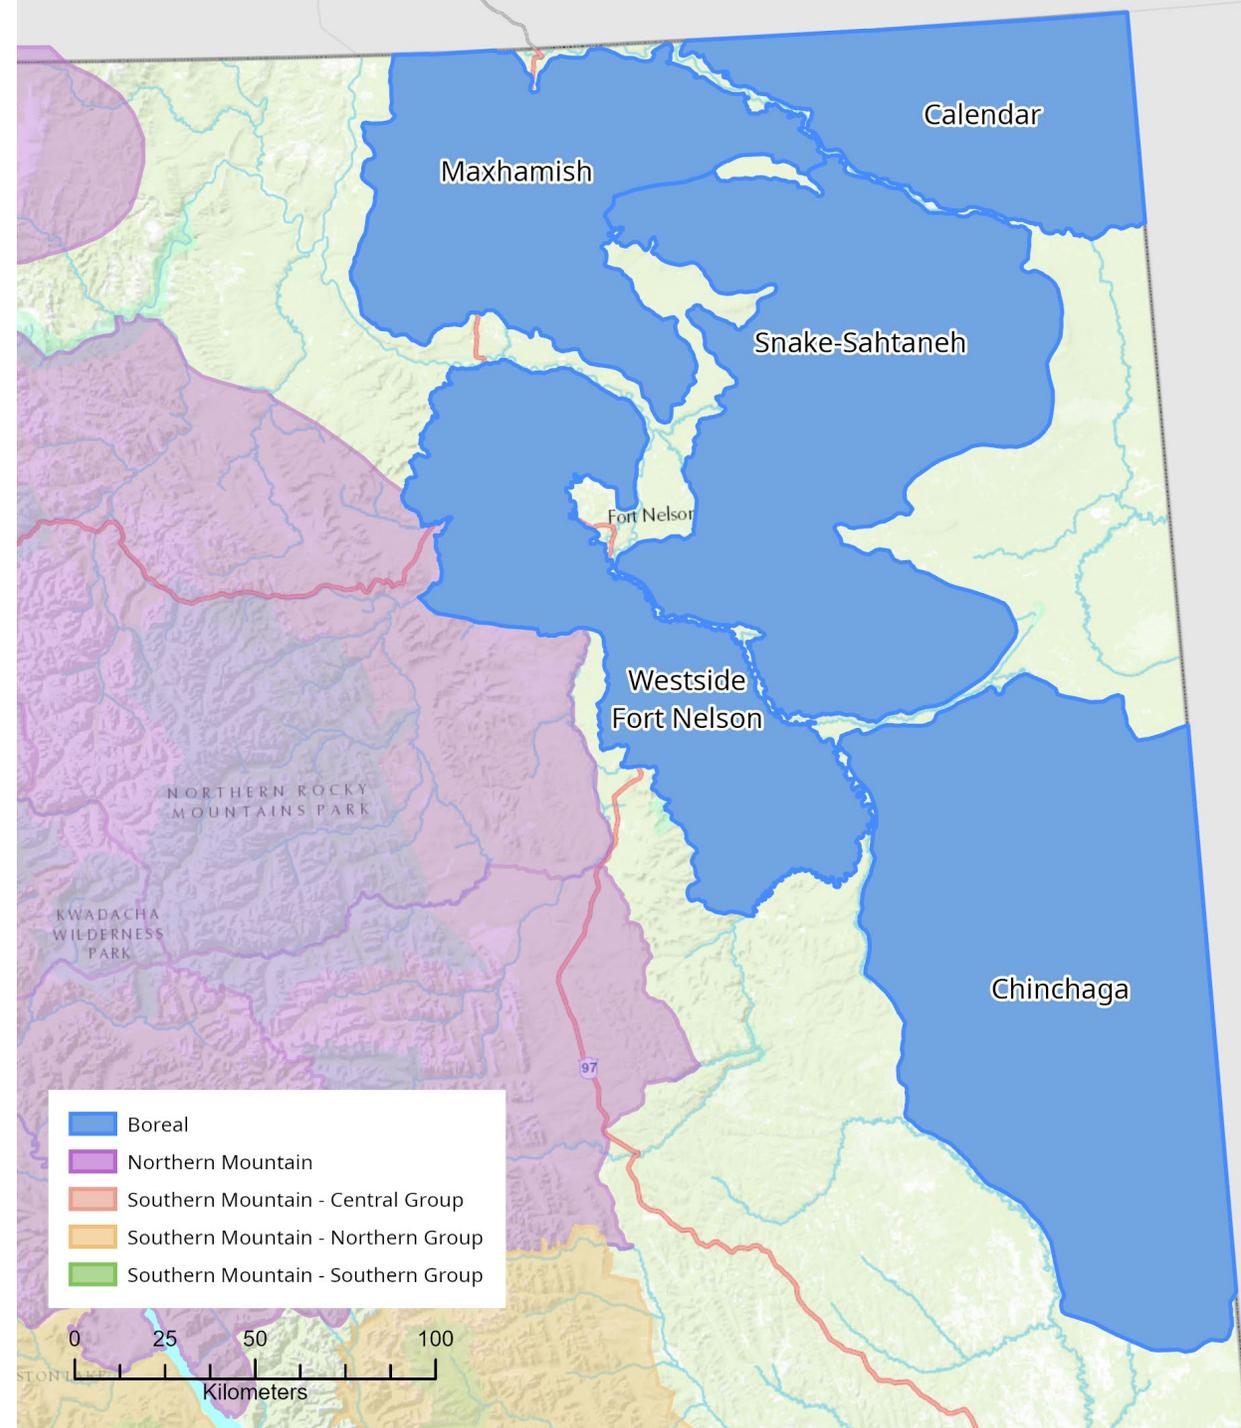

## Boreal – Population trend

- Based on aerial survey counts and classification
- Survival data from collared females

**Important to maintain our collar #s for accurate data**

2014-2024	Calendar	Chinchaga	Maxhamish	Snake-Sahtaneh	Westside Fort Nelson	Boreal Total
Calf:cow	0.20	0.21	0.24	0.21	0.22	<b>0.21</b>
Calf %	13.3	14.7	16.1	14.2	14.1	<b>14.4</b>
Survival Rate	0.85	0.91	0.89	0.90	0.92	<b>0.89</b>
Growth Rate	-0.07	0.01	0.00	0.00	0.03	<b>-0.01</b>

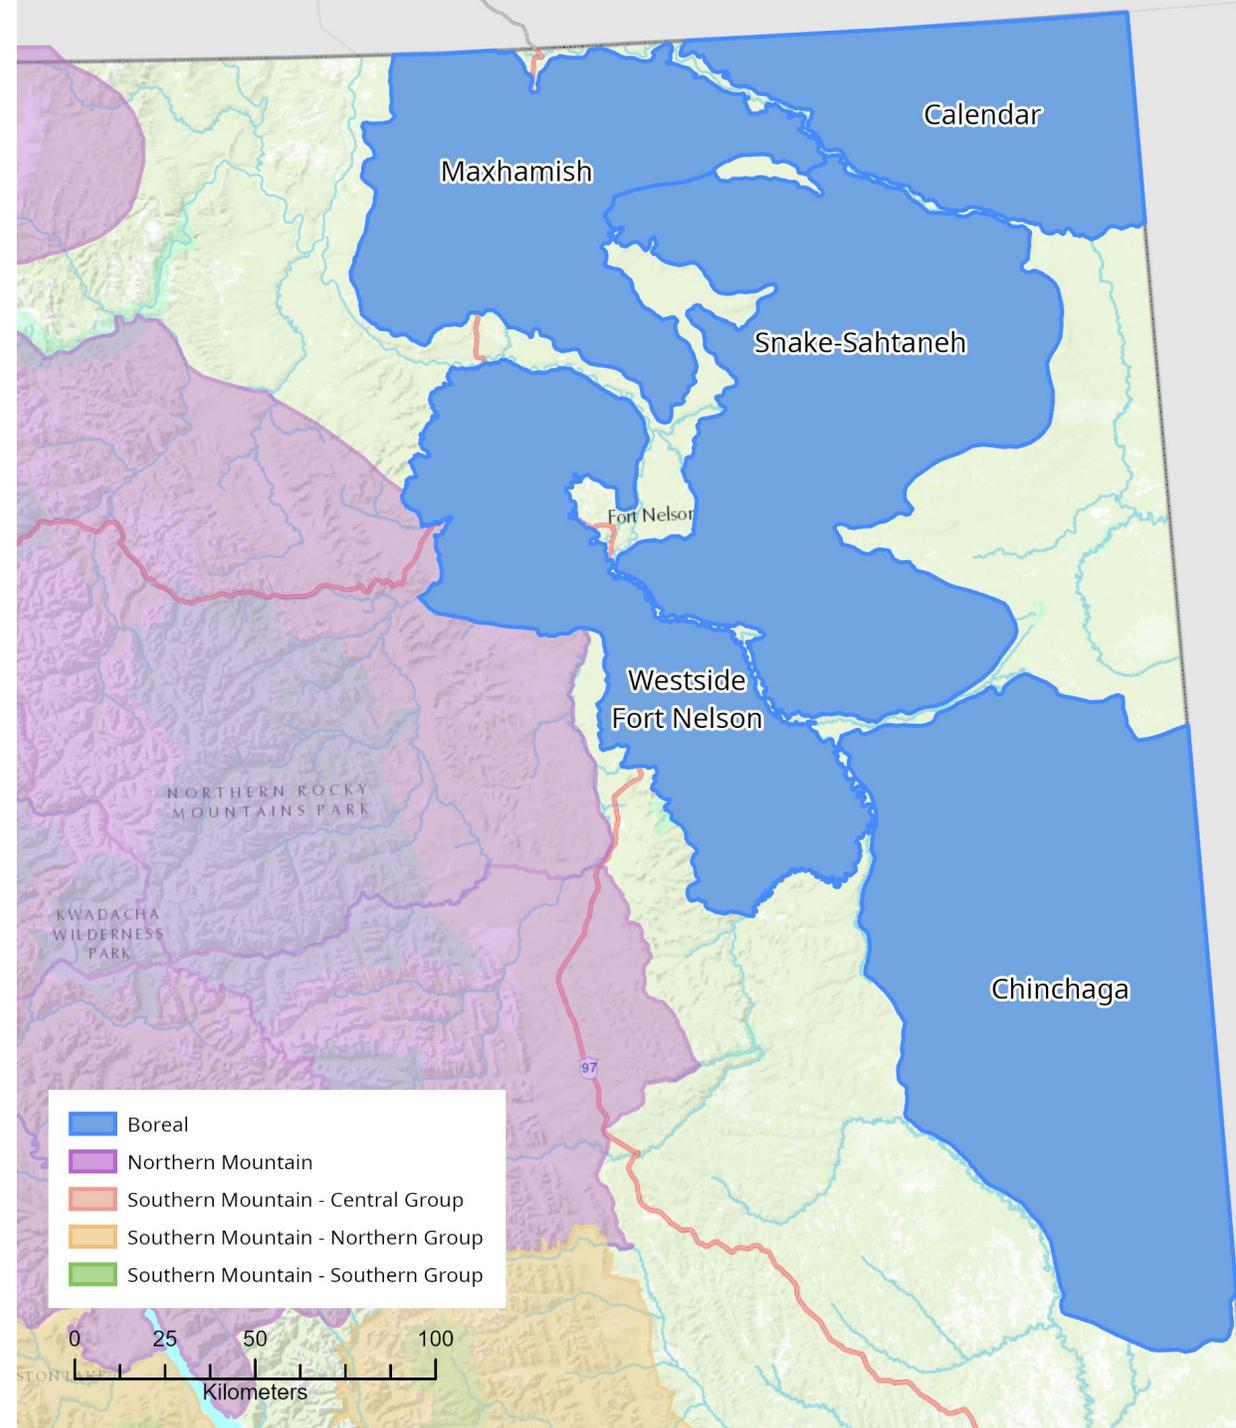

## Boreal – Population trend

- Based on aerial survey counts and classification
- Survival data from collared females

**Important to maintain our collar #s for accurate data**

	# of active collars	# observed	Calf %	Calf:Cow	Annual survival	Growth rate
2014	171	723	8.71	0.12	0.75	-20.4%
2015	163	678	9.88	0.15	0.85	-8.0%
2016	151	728	14.15	0.20	0.89	-1.7%
2017	149	499	14.83	0.21	0.91	-0.2%
2018	106	454	16.08	0.24	0.96	8.7%
2019	69	418	11.90	0.18	0.99	10.0%
2020	38	480	11.25	0.17	0.88	-4.7%
2021	59	643	14.20	0.25	0.93	5.0%
2022	83	972	13.70	0.22	0.90	0.2%
2023	120	798	18.3	0.29	0.81	-7.0%
2024	124	870	19.5	0.30	0.95	9.3%

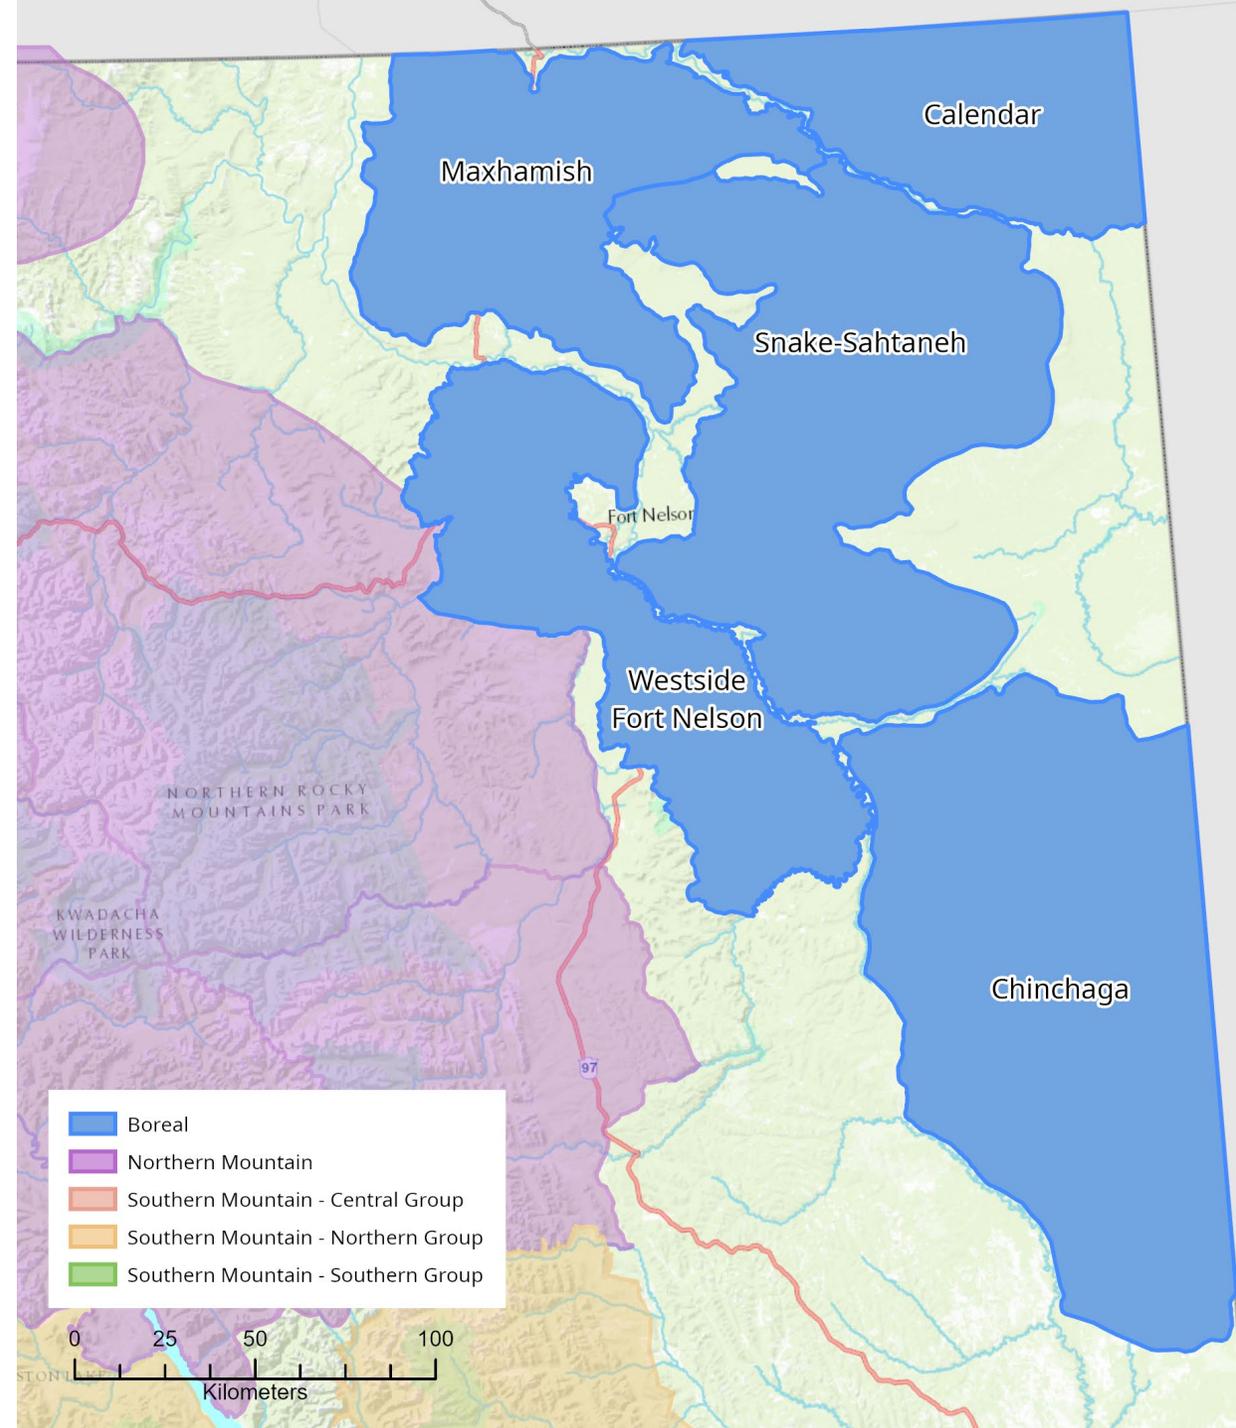

## Boreal – Recent monitoring results

### Captures 2025

**Lowest # of captures since start of regular monitoring in 2012: this is a good thing, # of collars brought back up to the level needed for efficient monitoring**

Range	# of collars deployed Jan 2025	# of active collars Feb 2025	# of deaths since April 1 <sup>st</sup> 2024
Calendar	1	21	0
Chinchaga	1 & 1 R	33	4
Hay River	3	7	0
Maxhamish	2 R	21	2
Snake-Sahtaneh	2 & 1 R	45	3
Westside Fort Nelson	1	14	2
<b>TOTAL</b>	<b>12</b>	<b>141</b>	<b>11</b>

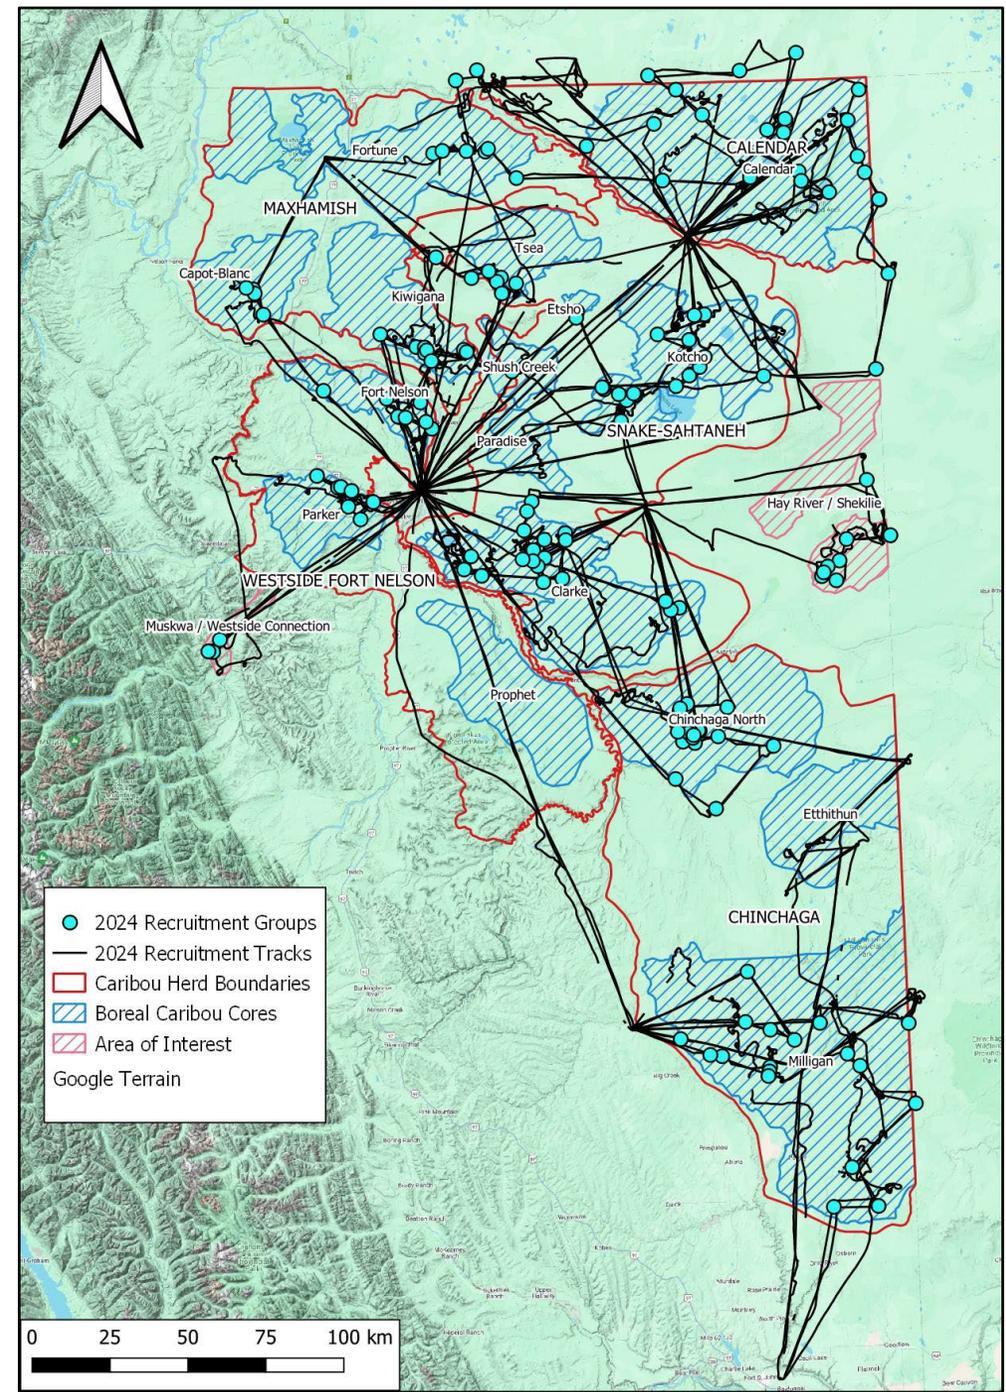

# Boreal – Recent monitoring results

## Aerial survey 2024

# observed	% calves	Calves:100 cows	Bulls:100 cows
870	19.5%	29.9	21.1

Boreal caribou are hard to see under forest cover, so it can be difficult to get an accurate population count from aerial surveys.

**The DNA found in caribou feces can be used to identify unique individuals**

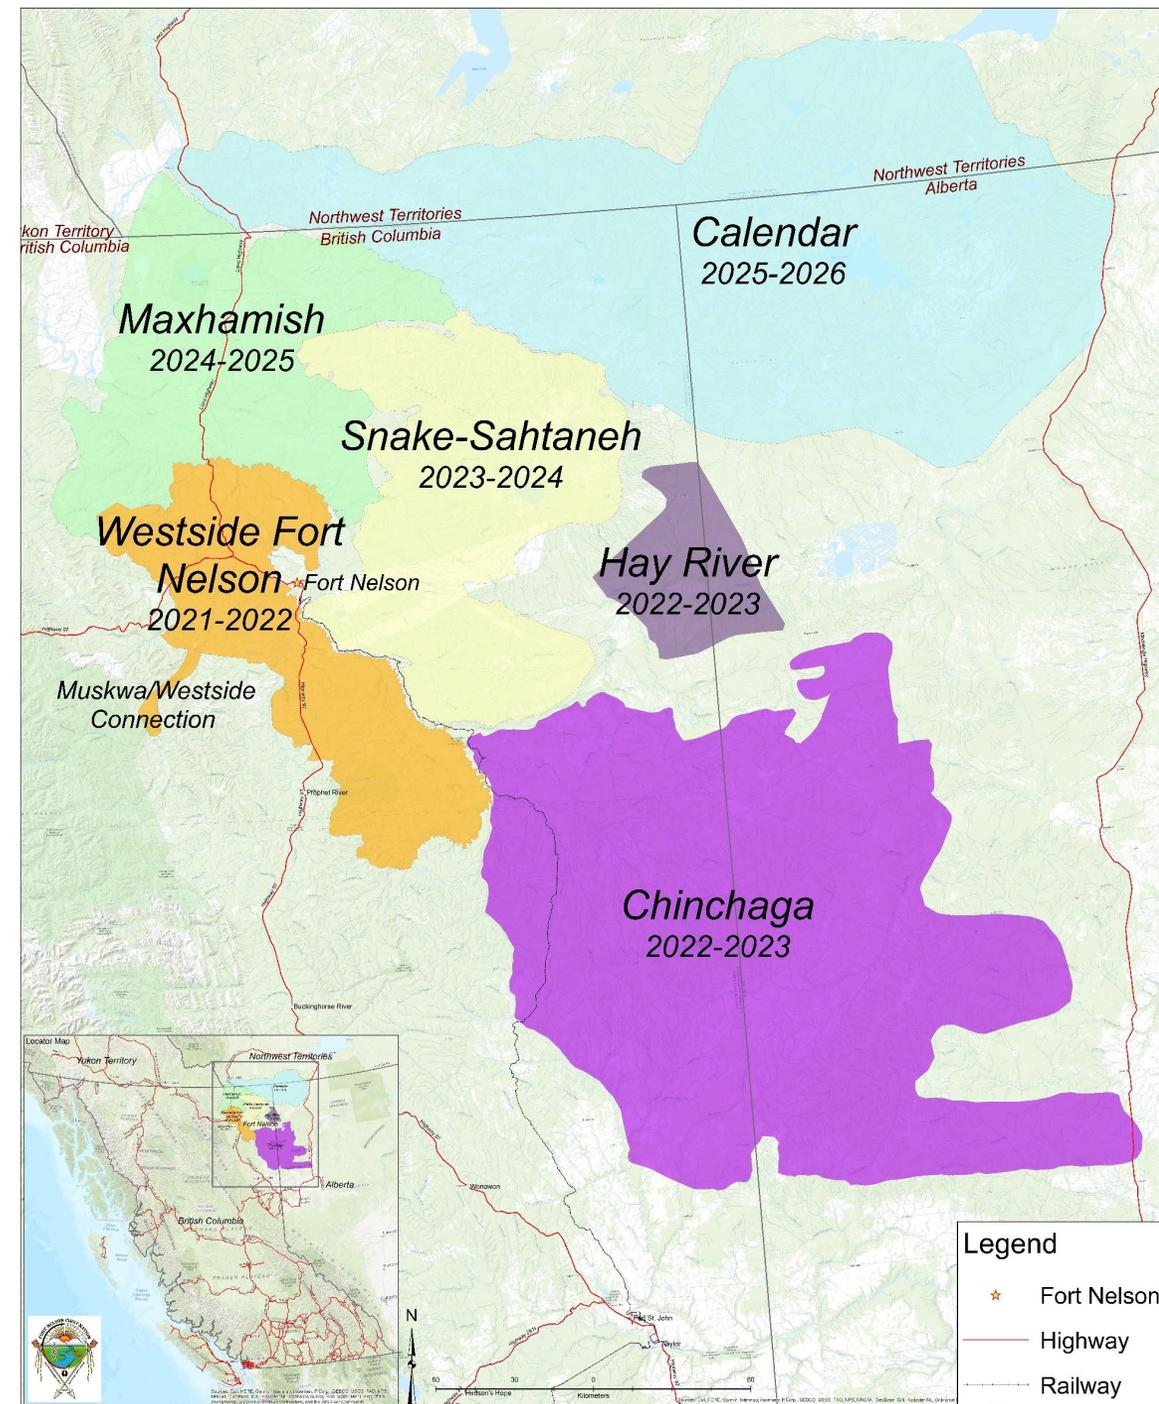

**If enough samples are collected, we can estimate how many caribou are on the land without needing to see them directly**

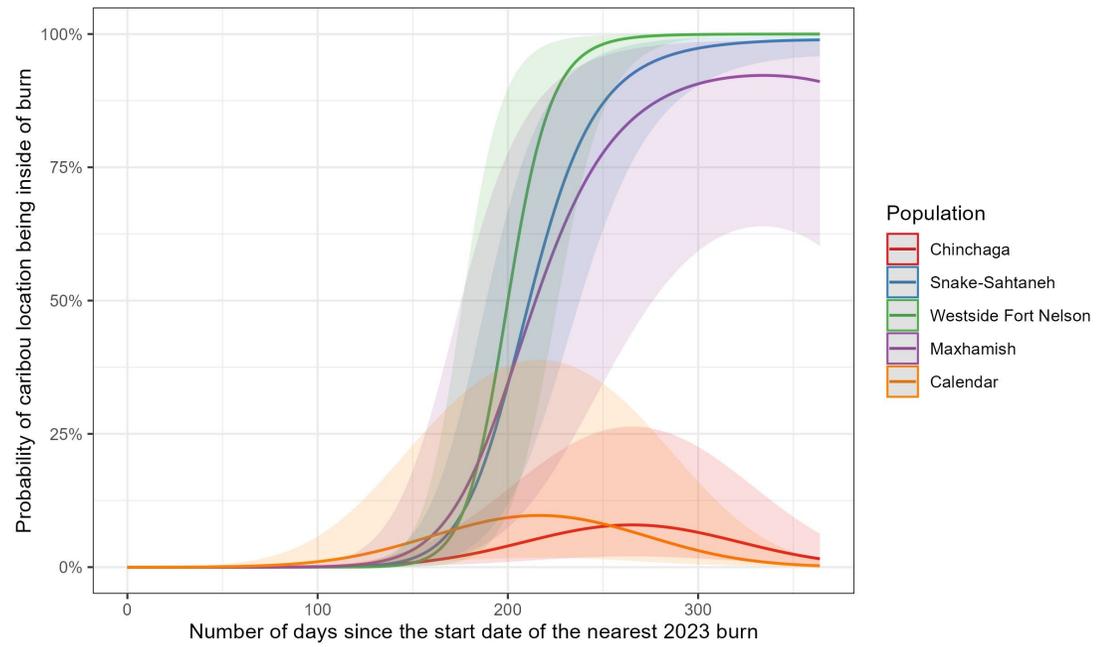

## 5-year project with DNA collections – so far:

Year	Range	# of sites	# of samples	Prelim. Population Estimate	# of Crew
2021-2022	Westside Fort Nelson	47	393	203 (95% 176-247)	17
2022-2023	Chinchaga-BC	81	631	Pending – 304 unique	30
2022-2023	Chinchaga-AB	71	738	Pending – 333 unique	16
2022-2023	Hay River	26	292	Pending	16
2023-2024	Snake-Sahtaneh	90	970	Pending	30
2023-2024	Maxhamish	46	555	Pending	30
2024-2025	Calendar	112	866	Pending	15

### 2025 - collaboration with FNFN:

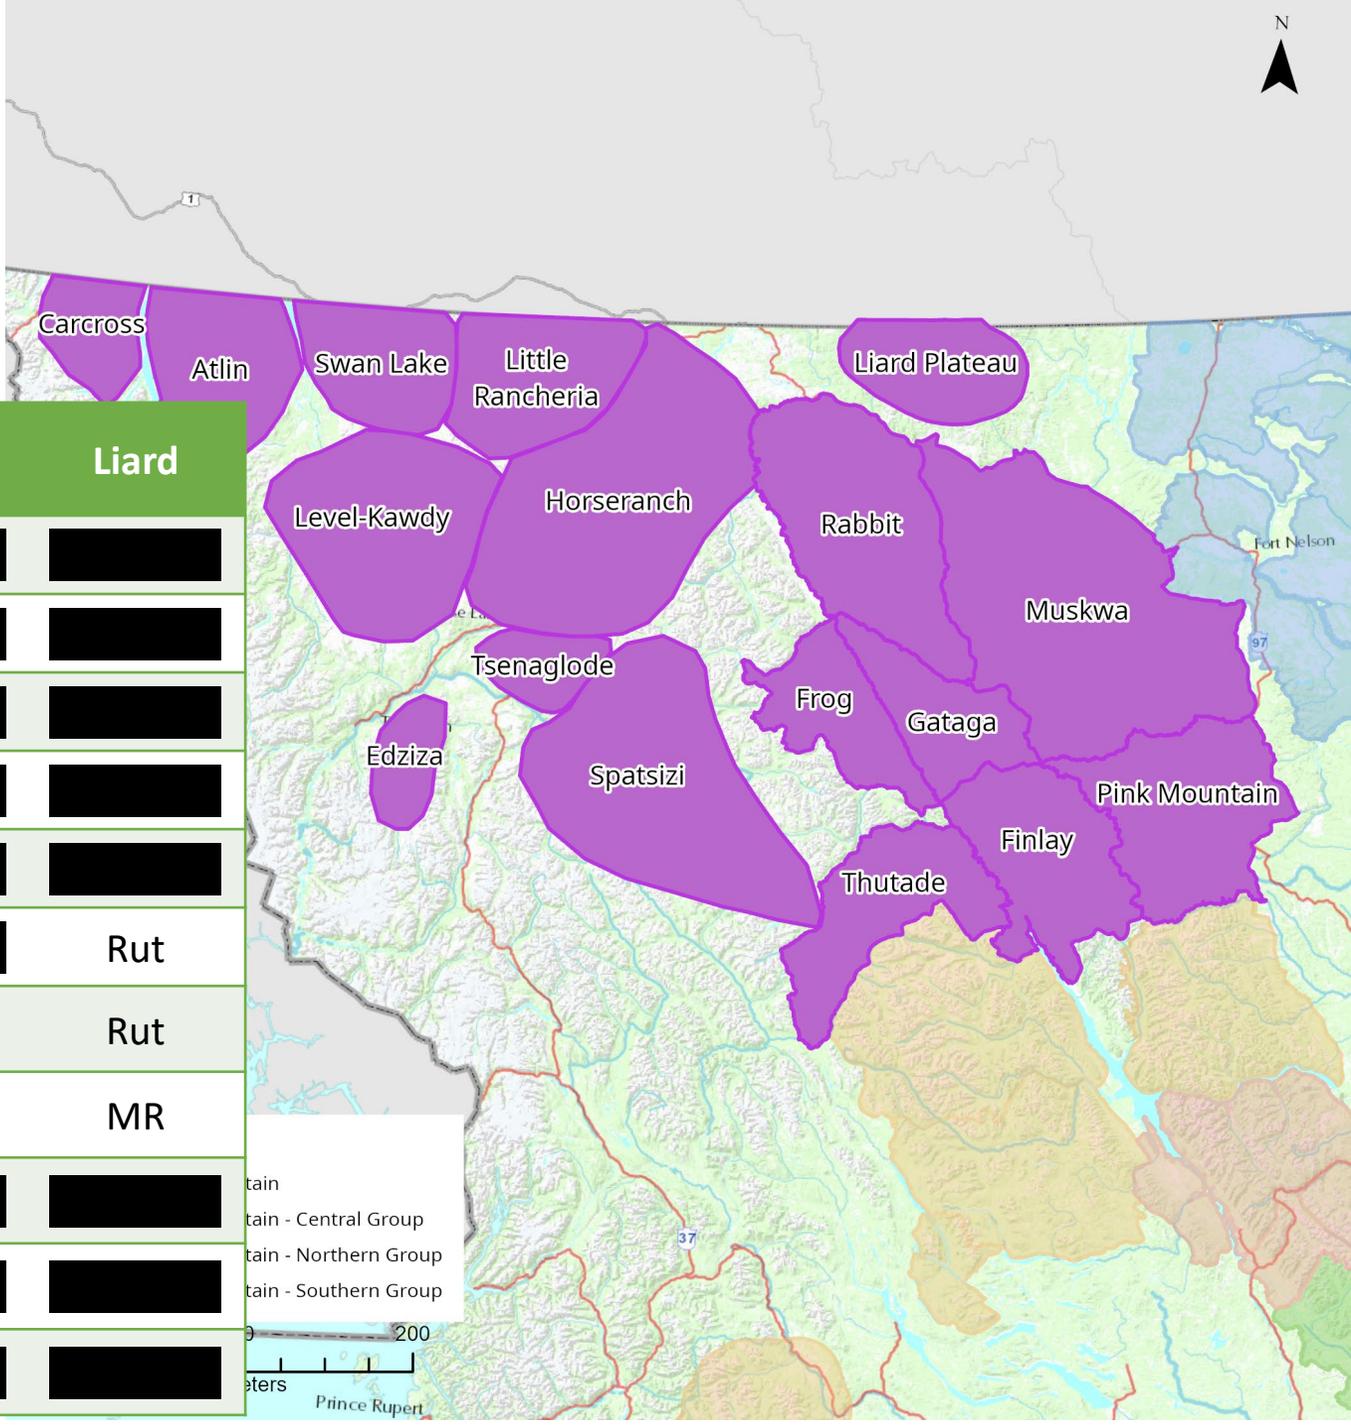

- Collared ~12 animals in boreal ranges to maintain >140 collars
- Calendar DNA completed
- Recruitment surveys in March 2025

# Northern Mountain – monitoring history

Special concern under SARA

	Pink Mountain	Muskwa	Gataga	Frog	Rabbit	Liard

# Northern Mountain – monitoring results

## Mark resight survey results

Should be considered a baseline for future trend assessment

	Year of last mark-resight	# observed	% calves	Calves : 100 cows	Bulls : 100 cows	Pop estimate	2017-2024 growth rate
Pink Mountain	2021	374	17	29	39	542 (SCF=0.63)	4.5%
Liard	2022	151	15.9	30	58	151 (SCF=1)	Unk
Rabbit	2022	1063	13.1	26	47	1110 (SCF=0.95)	Unk
Frog (incl. 3 outside blocks)	2023	205	19.5	56	38	261 (SCF=0.5)	Unk
Gataga	2023	179	15.6	39	81	179 (SCF=1)	Unk
Muskwa	2025						6.1%

# 2025 Muskwa Mark resight

- February 19-26, 2025
- 2 helicopters/crews
- 34 active GPS collars in range
- 43 survey blocks
- Should be finished today (Feb 25<sup>th</sup>)
